**FINAL EXAMINATION
(ONLINE)
SEMESTER II
SESSION 2019/2020**

COURSE NAME : ENGINEERING ECONOMY
COURSE CODE : BDA40902
PROGRAMME CODE : BDD
EXAMINATION DATE : JULY 2020
DURATION : 2 HOURS
INSTRUCTION : ANSWER ALL QUESTIONS

THIS QUESTION PAPER CONSISTS OF **TEN (10)** PAGES

CONFIDENTIAL

- Q1** (a) Identify **FIVE (5)** areas of personal finances in which you can use engineering economic analysis in the future. (5 marks)
- (b) Differentiate between nominal rates and effective rates. (4 marks)
- (c) “If you are 20 years of age and save RM1.00 each day for the rest of your life, you can become a millionaire”. Let’s assume that you live to age 80 and that the annual interest rate is 10 %. Assuming that the total day per year are 365 day. Provide a proven of the amazing effects with credibility of this statement. (3 marks)
- (d) Based on the break-even graph for an investment as shown in **Figure Q1(d)**, answer the following questions.

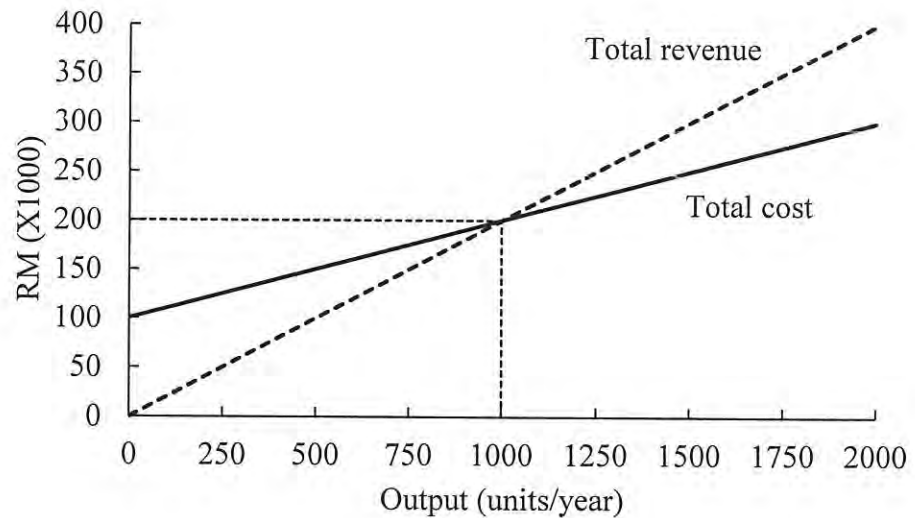

Figure Q1(d)

- i. Explain about break-even analysis. (2 marks)
- ii. Construct the equation for total revenue for x units per year. (3 marks)
- iii. Construct the equation for total costs for x units per year. (4 marks)
- iv. Calculate either profit or loss, if 1500 units been sold this year. (4 marks)

TERBUKA

- Q2** (a) Classify each of the following cost items as either fixed or variable cost (6 marks)
- (i) General Manager car
 - (ii) Water for car wash shop
 - (iii) Executive salaries
 - (iv) Electricity for the machinery in production floor
 - (v) Air-conditioning for the clean room in production floor
 - (vi) Operation and maintenance of building
- (b) Compute the amount based on situation given.
- What is the present equivalent of RM 25,000 to be received in 20 years when interest rate is 6% per year compounded semi annually? (4 marks)
- (c) A call center in India used by U.S. and U.K. credit card holders has a capacity of 1,600,000 calls annually. The fixed cost of the center is RM 850,000 with an average variable cost of RM 1.20 and price of RM 2.60 per call.
- (i) Calculate the percentage of the call capacity that must be placed each year to break even. (5 marks)
 - (ii) The center manager expects to dedicate the equivalent of 500,000 of the 1,600,000 capacity to a new product line. This is expected to increase the center's fixed cost to RM 900,000 of which 50% will be allocated to the new product line. Determine the average price per call necessary to make 500,000 calls the breakeven point for only the new product. (7 marks)
 - (iii) How does this required price compare with the current center price of RM 2.60 per call? (3 marks)
- Q3** (a) A new machine is proposed by Hakim Engineering Consultant to upgrade the power quality measurement at PQ meters. The investment cost is RM 45,000 with salvage value of RM 5,000 after 5 years. The revenue generated from the installation of the equipment minus the operating and maintenance cost of the equipment is RM 7,500 per year. The interest rate is 15% per year. Draw the cash flow diagram. (4 marks)

- (b) A remotely located air sampling station can be powered by solar cells or by running an above ground electric line to the site and using conventional power. Solar cells will cost RM 15,000 to install and will have a useful life of 5 years with no salvage value. Annual costs for inspection, cleaning, maintenance and part replacement are expected to be RM 4,000. A new power line will cost RM 40,000 to install, with power costs expected to be RM 1,000 per year. Since the air sampling project will end in 10 years, the salvage value of the line is considered to be zero. At an interest rate of 6% per year compounded monthly,
- (i) Calculate the effective interest rate per year (4 marks)
 - (ii) Determine which alternative should be selected on the basis of an present worth analysis (10 marks)
 - (iii) Determine the initial cost of the above ground line to make the two alternatives equally attractive economically (7 marks)

- Q4** (a) How much would is needed today to provide an annual amount of RM 50,000 each year for 5 years, at 10% interest compounded quarterly per year? (Use effective interest method) (3 marks)
- (b) A new project has been proposed by UTHM management to build a new rail from UTHM Parit Raja to UTHM Pagoh for Teaching and Learning (T&L) courses related to Bachelor of Engineering Technology (Railway Transportation). The land acquisition is estimated to be RM 0.7 Million. Construction cost for the rail is expected to be RM1.2 Million with an additional annual maintenance cost of RM 80, 000. Finally, this new railway project will require a train controller with an annual cost of RM 36, 000. Annual benefits of the runaway have been estimated as in **Table Q4(b)**.

Table Q4(b): Annual Benefits of the UTHM Rail Project

ITEM	RM
Rental receipt from a train carrier	RM 400, 000
Management charge to train passengers	RM 50, 000
Convenience benefit to the UTHM community	RM 35, 000
Additional tourism for both UTHM Parit Raja and Pagoh	RM 40, 000

Apply the B-C ratio method for both conventional and modified cases using PW method with the study period of 10 years and a MARR of 12% per year to determine whether the rail for UTHM should be crected.

(10 marks)

- (c) A school is over crowded and there are three options. The do-nothing alternative corresponds to continuing to use modular classrooms. The school can be expanded, or a new school can be built to “split the load” between the schools. User benefits come from improvements in school performance for the expanded or new schools. If a new school is built, there are more benefits because more students will be able to walk to school, the average distance for those who ride the school buses will be shorter, and the schools will be smaller and more “student-friendly.” The disbenefits for the expanded school are due to the impact of the construction process during the school year. The interest rate is 8%, and the life of each alternative is 20 years. Using the conventional benefit-cost ratio and modified benefit-cost ratio for annual worth value, determine the best alternative that should be chosen.

Table 1

Alternative	School expansion	New school
User benefits (per year)	RM 2.1 million	RM 3.1 million
User disbenefits	RM 0.8 million	-
First cost	RM 8.8 million	RM 10.4 million
Operation and maintenance (per year)	RM 0.95 million	RM 1.7 million

(12 marks)

COURSE CODE : BDA40902

The following information may be useful. The symbols have their usual meaning.

B-C Ratio using present worth:

$$B - C = \frac{PW(B)}{I - PW(MV) + PW(O\&M)}$$

Modified B-C Ratio using present worth:

$$B - C = \frac{PW(B) - PW(O\&M)}{I - PW(MV)}$$

B-C Ratio using annual worth:

$$B - C = \frac{AW(B)}{CR + AW(O\&M)}$$

Modified B-C Ratio using annual worth:

$$B - C = \frac{AW(B) - AW(O\&M)}{CR}$$
