

UNIVERSITI TUN HUSSEIN ONN MALAYSIA

**FINAL EXAMINATION
SEMESTER II
SESSION 2017/2018**

COURSE NAME : ANALYTICAL CHEMISTRY
COURSE CODE : DAS 12403
PROGRAMME : DAU
EXAMINATION DATE : JUNE / JULY 2018
DURATION : 2 HOURS 30 MINUTES
INSTRUCTION : ANSWER **FOUR (4)** QUESTIONS ONLY

TERBUKA

THIS QUESTION PAPER CONSISTS OF SIX (6) PAGES

CONFIDENTIAL

- Q1** (a) (i) Explain the terms quantitative and qualitative analysis in Analytical Chemistry. Give example for each. (4 marks)
- (ii) Differentiate between classical and instrumental methods. Give examples. (4 marks)
- (b) State the steps in quantitative analysis. Discuss briefly each steps. (10 marks)
- (c) Correct acquiring sample techniques and preservation methods are very important when performing quantitative analysis. Discuss. (7 marks)
- Q2** (a) A solution was made by dissolving 25.25 g of KOH (56.1056 g/mol) into 250 ml of distilled water. Assume the density of solution $d = 1.0186$ g/ml. Calculate the concentration in
- (i) molarity (3 marks)
- (ii) molality (3 marks)
- (iii) ppm (2 marks)
- (iv) % w/w (2 marks)
- (v) % w/v (2 marks)
- (b) A solution was prepared by dissolving 27.50 ml of concentrated sulfuric acid (molar mass = 98.08 g/mol, $d = 1.84$ g/ml, 97% w/w) in 100 ml volumetric flask. The solution is then further diluted to 0.2 M. Explain the procedure to prepare the solution. (8 marks)
- (c) (i) Define the terms accuracy and precision. (2 marks)
- (ii) Draw the pattern of the data if the data obtained were low accuracy low precision, high accuracy high precision and low accuracy high precision. (3 marks)
- Q3** (a) (i) Define the term titrimetry. (1 mark)
- (ii) State the categories of titrimetry based on type of reactions. (2 marks)
- (iii) Differentiate between end point and equivalence point. (2 marks)

TERBUKA

CONFIDENTIAL

- (b) (i) Explain what you can understand with 'titration curves'. (1 marks)
- (ii) Draw the titration curves for strong acid-strong base, strong base-strong acid, weak acid-strong base and weak base-strong acid titrations. (4 marks)
- (c) 4.06 g of impure magnesium oxide (MgO) was completely dissolved in 100 ml (in excess) 2.00 M hydrochloric acid (HCl). The excess acid required 19.7 ml of sodium hydroxide (NaOH) 0.200 M for neutralisation using phenolphthalein indicator and the end-point is the first permanent pink colour. Answer the following questions. Given atomic masses: Mg = 24.3, O = 16.
- (i) Explain the purpose of using excess acid. (1 marks)
- (ii) Write the balanced equations for all reactions. (2 marks)
- (iii) Calculate the moles of HCl added to the MgO. (2 marks)
- (iv) Calculate the moles of excess HCl. (2 marks)
- (v) Determine the percent purity of the MgO. (8 marks)
- Q4** (a) Draw and explain the energy transition between two states. (2 marks)
- (b) **Table Q4(b)** shows the UV/Vis analysis of **five (5)** standard solutions at different concentration. Answer the following questions.
- (i) Redraw the table and fill in the table completely. Show all the calculations. (20 marks)
- (ii) Plot the graph of absorbance versus concentration. (2 marks)
- (iii) Determine the concentration of unknown sample labeled as Sample A if the absorbance detected is 2.5. (1 mark)
- Q5** (a) Explain the followings.
- (i) infrared spectroscopy (2 marks)
- (ii) functional group (2 marks)
- (iii) the **four (4)** types of vibration modes in infrared spectroscopy. (4 marks)

TERBUKA**CONFIDENTIAL**

CONFIDENTIAL

- (b) Draw the structure of alcohol, carboxylic acid and alkane group. (6 marks)
- (c) Describe the difference between symmetric and asymmetrical stretching. (3 marks)
- (d) Given the IR spectra of two chemical compounds shown in **Figure Q5(d)(i) and Q5(d)(ii)**. Differentiate the two spectra by identifying at least **three (3)** absorbance bands in each spectrum. Predict the two compounds. (8 marks)

- Q6** (a) (i) Write the definition of chromatography. (1 mark)
- (ii) Explain **three (3)** types of chromatography. (6 marks)
- (iii) Describe **three (3)** major high performance liquid chromatography (HPLC) components and their functions. (6 marks)
- (b) An internal standard is used in the lab experiments using gas chromatography (GC) but not high performance liquid chromatography (HPLC). Explain. (2 marks)
- (c) Calculate the number of theoretical plates N and the plate height H , when the retention time is 15.20 minutes, half of the base width (given in minutes) is 0.55 minutes and the column length is 25cm. (5 marks)
- (d) The following questions regard to the chromatograms shown in **Figure Q6(d)**. Choose the column that
- (i) has greater efficiency. (1 mark)
- (ii) gives a greater selectivity factor (for X and Y). (2 marks)
- (iii) gives greater resolution between X and Y. (2 marks)

Justify the answer for each **Q6(d)** (i), (ii) and (iii).
