UNIVERSITI TUN HUSSEIN ONN MALAYSIA

**FINAL EXAMINATION
SEMESTER II
SESSION 2017/2018**

COURSE NAME : STRUCTURAL ANALYSIS
COURSE CODE : BFC21403
PROGRAMME CODE : BFF
EXAMINATION DATE : JUNE/JULY 2018
DURATION : 3 HOURS
INSTRUCTION : ANSWER ALL QUESTIONS IN
PART A AND ONE(1)
QUESTION IN PART B

TERBUKA

DR. FAISAL BIN SHEIKH KHALID
Penyair
Jabatan Kejuruteraan Struktur dan Bahan
Fakulti Kejuruteraan, Universiti Tun Hussein Onn Malaysia
Kampus Ulu Kelantan, 76100 Durian Tunggal, Johor Darul Ta'lim

THIS QUESTION PAPER CONSISTS OF SIX (6) PAGES

PART A

- Q1** (a) Truss and frame are categorized as skeleton structure. What is the main difference between truss and frame? (2 marks)
- (b) List **Two (2)** examples of truss structure application. (2 marks)
- (c) **Figure Q1(c)** shows a simply supported roof truss of a residential house. The crane is supported by pin support and roller support at points E and A respectively. The cross section area for the truss member is 750 mm^2 and the Young Modulus for all truss members is 250 kN/mm^2 .
- (i) Calculate the reaction supports of the truss. (3 marks)
- (ii) Determine the internal forces of the truss members. (17 marks)
- (iii) Calculate the vertical displacement at joint C. Express your answer in unit millimeter and assume the unit load acting downward. (9 marks)
- (iv) An additional member GC was introduced to the roof truss. Calculate the increment or decrement of internal force for members BC and GH. (7 marks)
- Q2** (a) Define stiffness in moment distribution method. (3 marks)
- (b) **Figure Q2(b)** shows a warehouse non-sway frame fixed supported at A and D while pinned support at E. The frame is uniformly loaded throughout spans AB and BC with 5 kN/m and 15 kN/m loads, respectively. Span BC has addition point loads of 10 kN at mid-span and span CE also have point load of 5 kN at mid-span. All frame members were made from mild steel.
- (i) Calculate the end moments for all members. (14 marks)
- (ii) Determine all the reactions at supports. (5 marks)
- (iii) Draw the shear force diagrams. (8 marks)

CONFIDENTIAL**PART B**

- Q3** (a) Describe the theorems that are very useful in application of influence lines. (7 marks)
- (b) **Figure Q3(b)** shows a continuous beam which supported by pin at point A and roller at points B and C. A hinge is provided at D.
- (i) Draw the influence line for reactions at supports B. (6 marks)
- (ii) Draw the influence line for bending moment at support B for the beam. (5 marks)
- (c) Draw the influence line for the forces in the following members of a through type truss shown in **Figure Q3(c)**.
- (i) Member 12-13. (4 marks)
- (ii) Member 5-12. (4 marks)
- (iii) Member 4-12. (4 marks)
- Q4** (a) Describe the terminology of plastic hinge. (5 marks)
- (b) The frame shown in **Figure Q4(b)** is subjected to a concentrated load of $3P$ and $2P$ at C and F respectively. The supports are pinned at A and H, and roller at E. All columns have the same plastic moment M_P whereas all beams have plastic moment $2M_P$.
- Given: $L = 4$ m and $P = 5$ kN
- (i) Sketch the possible collapse mechanisms for the frame. (8 marks)
- (ii) Determine the collapse load P . (17 marks)
