FINAL EXAMINATION
SEMESTER II
SESSION 2014/2015

COURSE NAME	:	STRUCTURE ANALYSIS & DESIGN
COURSE CODE	:	BNP 20803
PROGRAMME	:	2 BNA/2 BNB/2 BNC
EXAMINATION DATE	:	JUNE 2015/JULY 2015
DURATION	:	3 HOURS
INSTRUCTION	:	ANSWER **FOUR (4)** QUESTIONS ONLY DESIGN SHOULD BE BASED ON: BS EN 1990:2002+A1 2005 NA BS EN 1990:2002+A1:2005 BS EN 1991-1-1:2002 NA BS EN 1991-1-1:2002 BS EN 1992-1-1:2004 BS 8110:PART 1:1997 BS EN 1993 :2005

THIS QUESTIONS PAPER CONSISTS OF **SIXTEEN (16)** PAGES

Q1 One continuous beam which is supported by roller at B and D and fixed end support at C has uniformly distributed load 1500 kN/m along the beam as shown in **FIGURE Q1.** Given EI is constant.

(a) Calculate the moment at the joints by using moment distribution method.

(12 marks)

(b) Determine the support reaction.

(5 marks)

(c) Draw the shear force diagram

(4 marks)

(d) Draw the bending moment diagram.

(4 marks)

Q2 (a) There are several steps need to be considered to fulfill the structural design process. Describe the design process which involved building form and structural arrangement.

(3 marks)

(b) Explain briefly the important of serviceability limit state in the design stage for the structures.

(3 marks)

(c) **FIGURE Q2** shows part of the ground floor plan of a reinforced concrete office building. Slab thickness is 125 mm. Dimensions of the beams is given in the diagram. The finishes, ceiling and services form a characteristics permanent action of 1.5 kN/m^2. The characteristic variable action is 3.0 kN/m^2. 3.0 m high brickwall weighing 2.6 kN/m^2 is placed over the entire span of all beams. Given the additional following data:

Concrete Grade, f_{ck}	= 25 N/mm^2
Steel reinforcement Grade 500, f_{yk}	= 500 N/mm^2
Weight of concrete	= 25 kN/m^3

(i) Analyze the design action carried by beam B/1-2 and sketch the action distribution on the beam from each slab.

(15 marks)

(ii) Calculate and sketch the bending moment and shear force for beam B/1-2.

(4 marks)

SEMESTER/SESI: SEM II/2014/2015
PROGRAMME: 2BNA/2BNB/2BNC
COURSE NAME: STRUCTURE ANALYSIS & DESIGN
COURSE CODE: BNP 20803

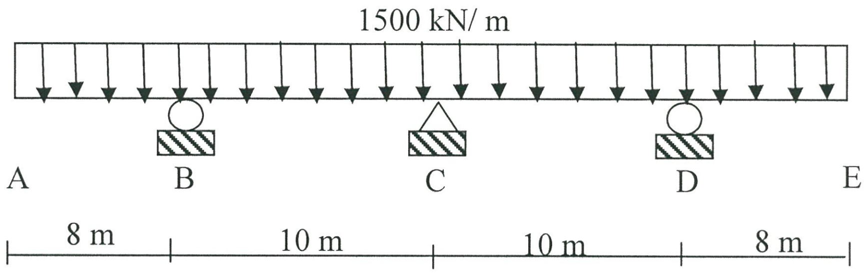

FIGURE Q1

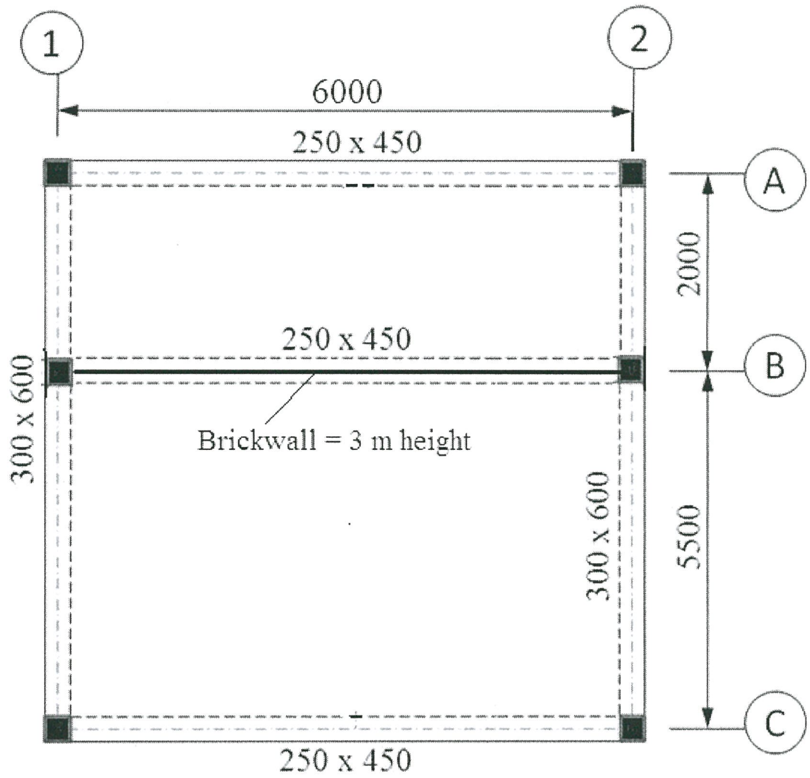

FIGURE Q2

CONFIDENTIAL

Q3 A rectangular reinforced concrete beam in **FIGURE Q3** is simply supported on two masonry wall and 8.0 m length. Given;

Characteristic Action:	
Permanent, *gk*	= 15 kN/m (excluding selfweight)
Variable, qk	= 10 kN/m
Design life	= 50 years
Fire resistance	= R60
Exposure classes	= XC1
Material	
Strength of concrete, fck	= 20 N/mm²
Strength of steel, fyk	= 500 N/mm²
Strength of link, fyk	= 500 N/mm²
Unit weight of reinforced concrete	= 25 kN/m³
Use assumed size of bar as bellow:	
Øbar1	= 20 mm
Øbar2	= 12 mm
Ølink	= 8 mm

(a) Determine the nominal concrete cover.

(3 marks)

(b) Determine the shear force and bending moment.

(3marks)

(c) Design the main reinforcement.

(7marks)

(d) Design shears reinforcement.

(7 marks)

(e) Check the deflection and cracking of beam.

(5marks)

COURSE NAME: STRUCTURE ANALYSIS & DESIGN COURSE CODE: BNP 20803

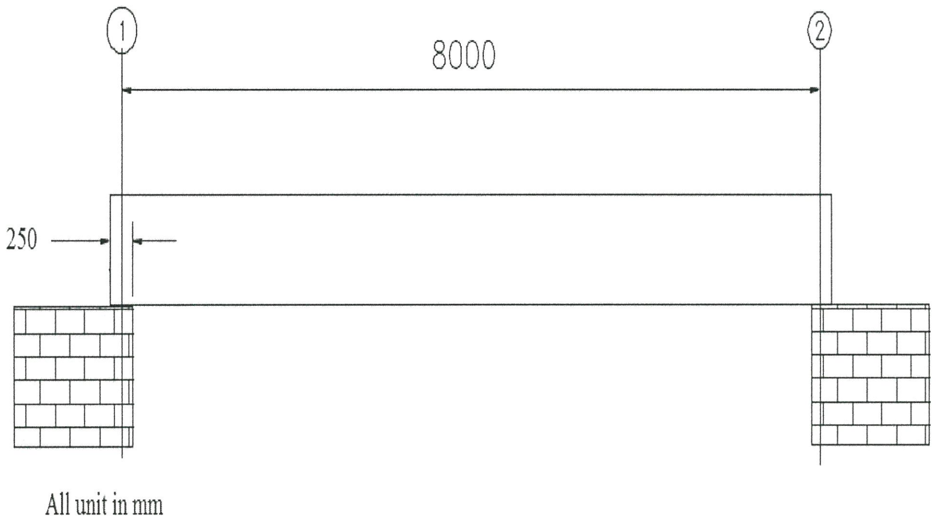

FIGURE Q3

CONFIDENTIAL

Q4 **FIGURE Q4** shows the layout plan for the part of the first floor of reinforced concrete buildings. The concrete for slabs and beams are poured together and the thickness of the slab is 175 mm. Detail specification is given as follows:

Design action, n $= (1.35g_k + 1.5q_k)$	=	15 kN/m^2.
Characteristic strength of concrete, f_{ck}	=	25 N/mm^2
Characteristic strength of steel bar, f_{yk}	=	500 N/mm^2
Concrete cover, c	=	25 mm

(a) Determine the positive and negative moments for Panel S1.

(6 marks)

(b) Determine the minimum and maximum reinforcement area.

(3 marks)

(c) Design the flexural reinforcement required at mid span. Assume bar size of 10 mm.

(10 marks)

(d) Check the deflection for the slab panel.

(6 marks)

Q5 (a) Steel sections are rolled or formed into a variety of cross-sections. Steel sections are usually produced in a variety of grades of steel which having different strengths and other properties such as mechanical properties. List the mechanical properties for steel.

(7 marks)

(b) Classify the cross-section of a 610 x 229 x 125UB grade S275 as shown in **FIGURE Q5**. The section is subjected to bending moment at a major axis (y-y) and axial force of 350 kN.

(18 marks)

APPENDIX

Table 5.5: Minimum dimensions and axis distances for simply supported beams made with reinforced and prestressed concrete

Standard fire resistance	Minimum dimensions (mm)						
	Possible combinations of a and b_{min} where a is the average axis distance and b_{min} is the width of beam				Web thickness b_w		
					Class WA	Class WB	Class WC
1	2	3	4	5	6	7	8
R 30	b_{min} = 80 a = 25	120 20	160 15*	200 15*	80	80	80
R 60	b_{min} = 120 a = 40	160 35	200 30	300 25	100	80	100
R 90	b_{min} = 150 a = 55	200 45	300 40	400 35	110	100	100
R 120	b_{min} = 200 a = 65	240 60	300 55	500 50	130	120	120
R 180	b_{min} = 240 a = 80	300 70	400 65	600 60	150	150	140
R 240	b_{min} = 280 a = 90	350 80	500 75	700 70	170	170	160
$a_{sd} = a + 10mm$ (see note below)							
For prestressed beams the increase of axis distance according to 5.2(5) should be noted. a_{sd} is the axis distance to the side of beam for the corner bars (or tendon or wire) of beams with only one layer of reinforcement. For values of b_{min} greater than that given in Column 4 no increase of a_{sd} is required. * Normally the cover required by EN 1992-1-1 will control.
