**UNIVERSITI TUN HUSSEIN ONN MALAYSIA**

**FINAL EXAMINATION  
SEMESTER II  
SESSION 2016/2017**

COURSE NAME : YARN PRODUCTION  
TECHNOLOGY

COURSE CODE : BNH 20203

PROGRAMME CODE : BNH

EXAMINATION DATE : JUNE 2017

DURATION : 2 HOURS 30 MINUTES

INSTRUCTION : ANSWER ALL QUESTIONS

**TERBUKA**

THIS QUESTION PAPER CONSISTS OF FIVE (5) PAGES

**CONFIDENTIAL**

UNIVERSITI TUN HUSSEIN ONN MALAYSIA  
Fakulti Teknologi Kejuruteraan  
Jabatan Teknologi Kejuruteraan Tekstil  
Kampus Kuching  
08000 Kuching, Sarawak

- Q1**
- (a) The ability to turn fibres into yarn must consider several fibre characteristics. Explain **FOUR (4)** of the main textile fibre characteristics. (8 marks)
- (b) Justify the difference between yarn and thread. Discuss the characteristic of compound yarn. (6 marks)
- (c) Assess the strength of yarn with regard of its twist and bulkiness. (4 marks)
- (d) Fibres must be prepared before spinning process can be performed. List **TWO (2)** of the reasons. (2 marks)
- Q2**
- (a) As a textile engineering technologist, recommend the processes where blending of TC can be made. Discover the benefit of producing TC. List **TWO (2)** factors affecting the properties of blended yarns. (6 marks)
- (b) 800 kilograms fibres were processed in blowroom and the waste collected was 3100 grams. Calculate the percentage of trash eliminated during the process. (2 marks)
- (c) Sketch **THREE (3)** opening devices used in blowroom line and describe **THREE (3)** factors affecting the intensity of the opening. (6 marks)
- (d) Name part A, B and C in **Figure Q2 (d)**. Explain the function of each part. (6 marks)

- Q3** (a) A carding unit with calendar roller diameter 85mm is producing sliver at 27.3 kg/hr. The roller speed is 600rpm with 97% machine efficiency. The waste generated is recorded as 2.3%. Calculate the sliver weight (in Tex).  
(7 marks)
- (b) Discover **THREE (3)** of the importance of combing and distinguish **FOUR (4)** differences between combed and carded yarns.  
(7 marks)
- (c) Sketch any **THREE (3)** of the following operating sequence in a combing process:
- (i) Lap nipping by nipper
  - (ii) Combing by cylinder
  - (iii) Piecing of web
  - (iv) Combing by top comb
  - (v) Waste extraction by the brush
- (6 marks)
- Q4** (a) Evaluate the card sliver weight if the infeed weight is 36 kTex and doublings are 6.  
(2 marks)
- (b) **Figure Q4 (b)** shows gear arrangement for spinning process. Analyse:
- (i) Draft between Front Roller (FR) and Middle Roller (MR)  
(3 marks)
  - (ii) Draft between Middle Roller (MR) and Back Roller (BR)  
(3 marks)
  - (iii) Total draft  
(3 marks)
- (c) Irregularity refers to the uneven distribution of fibres along the length of the material. Discuss **TWO (2)** of the causes of irregularity and recommend **TWO (2)** ways to reduce or control irregularity.  
(4 marks)
- (d) Drafting arrangement is the most important unit in ring spinning. List **THREE (3)** effects of drafting and identify **TWO (2)** important factors to consider in drafting.  
(5 marks)

- Q5** (a) With aid of diagram illustration, label the important parts of roving frame such as can, drafting rollers, spindle, bobbin, flyer and presser arm. (6 marks)
- (b) Determine the function of flyer and presser arm in roving process. (4 marks)
- (c) As a textile engineering technologist in a spinning industry, you found that some automation features need to be implemented in the operations. Develop a proposal which highlighted the area where automation is necessary and justify the reason. (10 marks)
