

CONFIDENTIAL

UNIVERSITI TUN HUSSEIN ONN MALAYSIA

**FINAL EXAMINATION
SEMESTER II
SESSION 2012/2013**

COURSE NAME : ENGINEERING STATISTICS
COURSE CODE : BDA 24103
PROGRAMME : 2 BDD
EXAMINATION DATE : JUNE 2013
DURATION : 3 HOURS
INSTRUCTIONS : ANSWER ALL QUESTIONS IN PART A AND TWO (2) QUESTIONS IN PART B

THIS QUESTION PAPER CONSISTS OF TEN (10) PAGES

CONFIDENTIAL

PART A

1 Please interpret the outputs as follows:

Variables Entered/Removed^b

Model	Variables Entered	Variables Removed	Method
1	Breaking strength ^a		Enter

a. All requested variables entered.

b. Dependent Variable: Specific gravity

Model Summary

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.913 ^a	.834	.813	.33213

a. Predictors: (Constant), Breaking strength

ANOVA^b

Model	Sum of Squares	df	Mean Square	F	Sig.
1	Regression	4.428	4.428	40.139	.000 ^a
	Residual	.882	.110		
	Total	5.310			

a. Predictors: (Constant), Breaking strength

b. Dependent Variable: Specific gravity

Coefficients^a

Model	Unstandardized Coefficients		Beta	t	Sig.
	B	Std. Error			
1	(Constant)	6.514	.853	7.639	.000
	Breaking strength	10.829	1.709	.913	.000

a. Dependent Variable: Specific gravity

[20 marks]

- 2 A promoter claimed that the mean amount of tar in filtered (F) cigarettes is less than the mean amount of tar in nonfiltered (NF) cigarettes. Refer to the data listed in Table 1, use a 0.05 level of significance to test the promoter's claim.

Table 1. Tar contents (in mg) of cigarettes.

F	16	15	16	14	16	11	16	18	10	14	12	11	14	13	13	13	16	16	8	16	11
NF	23	23	24	26	25	26	21	24													

- a. Assume σ unknown but equal,
 - b. Assume σ unknown but unequal,
- and the two populations are normally distributed.

[20 marks]

- 3 Given the data of the number of hours (X) from 10 students which studied for a statistics test and their scores on the test (Y) in Table 2.

Table 2. Hours studied (X) against Test scores (Y).

X	4	9	10	14	4	7	12	22	1	17
Y	31	58	65	73	37	44	60	91	21	84

- a. Draw the scatter plot for X and Y.
- b. Find and interpret the sample correlation coefficient between X and Y.
- c. Find β_0 , β_1 and σ^2 .
- d. Find the estimated regression line.
- e. Find the value of Y if X = 8.

[20 marks]

PART B

- 4 a. A city health department wishes to determine whether the mean bacteria count per unit volume of water at a lake is within the safety level of 200. A researcher collected 10 water samples of unit volume and found the bacteria to be

175 190 207 193 184 204 205 193 196 180

Do the data strongly indicate that the mean bacteria count is within the safety level? Test at 5% level of significance.

[10 marks]

- b. A sport biologist claimed that female distance runners tend to be taller on the average than women in general, who has an average height of 160 cm. To study this, she obtained a sample of 45 female distance runners and recorded their height, with the following results.

$$\bar{x} = 164 \text{ cm} \text{ and } \sigma^2 = 76.5625 \text{ cm}$$

Using these results, test the claim at 5% level of significance.

[10 marks]

- 5 a. The data survey credit card holder in Malaysia such as in Table 3.

Table 3. Statistics parameters.

Year	2005	2006
Sample mean	756	784
Sample size	14	24
Sample standard deviation	12	9

Test at 0.1 significance level of the mean credit card holders in 2005 and 2006 were different. Assume that variances of population are unknown but not equal.

[8 marks]

- b. An examination was given to two sections of 35 and 45 students, respectively. In section 1, the mean score was 76 with a standard deviation of 9, while in Section 2, the mean score was 80 with a standard deviation of 8. Is there a significant difference between the performance of the two sections at the 0.05 level?

[12 marks]

- 6 a. Make the following test of hypothesis.

- (i). $H_0 : \mu = 83, H_1 : \mu \neq 83, n = 35, \bar{x} = 80.5, \sigma = 15, \alpha = 0.10$
(ii). $H_0 : \mu = 42, H_1 : \mu < 42, n = 75, \bar{x} = 40.5, \sigma = 7.4, \alpha = 0.01$

[8 marks]

- b. A restaurant manager claims that mean waiting time all customers in his restaurant before being served is at most one minute. A researcher wants to test the manager's claim. He randomly interviewed 50 customers and found a mean waiting time of 1.2 minutes with a standard deviation of 30 seconds. Is the restaurant manager's claim valid at a 1% significance level?

[12marks]

Table

1. Percentage points of the normal distribution.
2. Percentage points of the t - distribution.
3. Percentage points of the F - distribution

Table 4

PERCENTAGE POINTS OF THE NORMAL DISTRIBUTION

The table gives the 100α percentage points, u_α , of a standardised Normal distribution where $\alpha = \frac{1}{\sqrt{2\pi}} \int_{u_\alpha}^{\infty} e^{-u^2/2} du$. Thus u_α is the value of a standardised Normal variate which has probability α of being exceeded.

α	u_α

Table 5

ORDINATES OF THE NORMAL DISTRIBUTION

The table gives $\phi(u)$ for values of the standardised Normal variate, u , in the interval

$$0.0(0.1)4.0 \text{ where } \phi(u) = \frac{1}{\sqrt{2\pi}} e^{-u^2/2}$$

Table 7

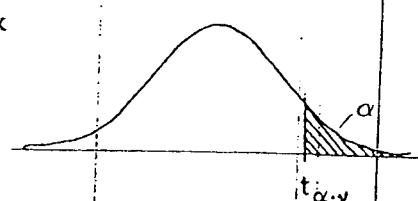

PERCENTAGE POINTS OF THE t DISTRIBUTION

The table gives the value of $t_{\alpha; \nu}$ — the 100 α percentage point of the t distribution for ν degrees of freedom.

The values of t are obtained by solution of the equation:-

$$\alpha = \Gamma\left(\frac{1}{2}(\nu+1)\right) \left\{\Gamma\left(\frac{1}{2}\nu\right)\right\}^{-1} (\nu\pi)^{-1/2} \int_t^{\infty} (1 + x^2/\nu)^{-(\nu+1)/2} dx$$

Note. The tabulation is for one tail only i.e. for positive values of t . For $|t|$ the column headings for α must be doubled.

∞	1.282	1.645	1.960	2.326	2.576	3.090	3.291

This table is taken from Table III of Fisher & Yates: Statistical Tables for Biological Agricultural and Medical Research, published by Oliver & Boyd Ltd., Edinburgh, and by permission of the authors and publishers and also from Table 12 of Biometrika Tables for Statisticians, Volume 1, by permission of the Biometrika Trustees.

Table 9

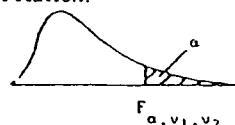

PERCENTAGE POINTS OF THE F DISTRIBUTION

The table gives the values of $F_{\alpha}; \nu_1, \nu_2$ the 100α percentage point of the F distribution having ν_1 degrees of freedom in the numerator and ν_2 degrees of freedom in the denominator.

For each pair of values of ν_1 and ν_2 , $F_{\alpha}; \nu_1, \nu_2$ is tabulated for $\alpha = 0.05, 0.025, 0.01, 0.001$, the 0.025 values being bracketed.

The lower percentage points of the distribution may be obtained from the relation:-

$$F_{1-\alpha; \nu_1, \nu_2} = 1/F_{\alpha; \nu_2, \nu_1}$$

e.g. $F_{.95; 12, 8} = 1/F_{.05; 8, 12} = 1/2.85 = 0.351$

This table is taken from Table V of Fisher & Yates: Statistical Tables for Biological, Agricultural and Medical Research, published by Oliver & Boyd Ltd., Edinburgh, and by permission of the authors and publishers and also from Table 18 of Biometrika Tables for Statisticians, Volume 1, by permission of the Biometrika Trustees.

Table 9

PERCENTAGE POINTS OF THE F DISTRIBUTION

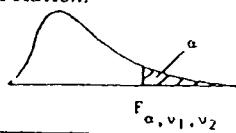

The table gives the values of $F_{\alpha; \nu_1, \nu_2}$, the 100 α percentage point of the F distribution having ν_1 degrees of freedom in the numerator and ν_2 degrees of freedom in the denominator.

For each pair of values of ν_1 and ν_2 , $F_{\alpha; \nu_1, \nu_2}$ is tabulated for $\alpha = 0.05, 0.025, 0.01, 0.001$, the 0.025 values being bracketed.

The lower percentage points of the distribution may be obtained from the relation:-

$$F_{1-\alpha; \nu_1, \nu_2} = 1/F_{\alpha; \nu_2, \nu_1}$$

e.g. $F_{.95; 12, 8} = 1/F_{.05; 8, 12} = 1/2.85 = 0.351$
