

**CONFIDENTIAL**

**UNIVERSITI TUN HUSSEIN ONN MALAYSIA**

**FINAL EXAMINATION  
SEMESTER II  
SESSION 2012/2013**

**COURSE NAME : KINEMATICS MECHANISMS**  
**COURSE CODE : BDC 4043**  
**PROGRAMME : BACHELOR OF MECHANICAL  
ENGINEERING WITH HONOURS**  
**DATE : JUNE 2013**  
**DURATION : 3 HOURS**  
**INSTRUCTIONS : ANSWER ALL QUESTIONS**

**THIS PAPER CONSIST OF FIVE (5) PAGES**

**CONFIDENTIAL**

- Q1** The cam follower can be classified according to the shape, motion or position. Draw the kinematics diagrams of cam followers according to:
- (a) the shape of the follower (5 marks)
  - (b) the motion of the follower (3 marks)
  - (c) the position of the follower (2 marks)
- Q2** A cam is used to lift boxes from lower conveyor to upper conveyor repeatedly. The illustration of the mechanism is shown in **FIGURE Q2**. The follower sequence in one cycle is the following:
- > Rise 5 cm in 1.0s
  - > Dwell for 0.3s
  - > Fall 2.5 cm in 0.9s
  - > Dwell for 0.6s
  - > Fall 2.5 cm in 0.9s
- (a) Calculate the time for a full cycle. (2 marks)
  - (b) Calculate the required rotational speed of the cam (in RPM). (3 marks)
  - (c) Determine the cam rotation in each interval. (2 marks)
  - (d) Plot the displacement diagram of the cam. (3 marks)
- Q3** A simplified kinematics mechanism is shown in **FIGURE Q3**. The link BC is a variable link with point C is a slider joint. The link AB is a crank link.
- (a) Draw the position of this mechanism when the crank AB rotates 2 seconds from the initial position as shown in **FIGURE Q3**. (5 marks)
  - (b) By using graphical method, find the velocity of all moving links. In your illustration you have to indicate clearly the direction of the vectors. (5 marks)
  - (c) By using analytical vector method, find the velocity of all moving links. (10 marks)
  - (d) By using analytical vector method, find the acceleration of all moving links. (15 marks)

**Q4** A simplified mechanism is shown in **FIGURE Q4**.

- (a) By using graphical approach (either instantaneous center of velocity or relative velocity), find the velocity of point B, C and D

(5 marks)

- (b) By using graphical approach find the acceleration of point B, C and D

(15 marks)

- (c) Do an analytical vector approach to find the acceleration of point D.

(15 marks)

**Q5** A mechanism is shown in **FIGURE Q5**. The coordinate data is listed below

	X (mm)	Y (mm)
A	81404	25033
B	44371	39167
C	7902	45598
D	22085	33696
E	57036	4368

Investigate the motion path of point A. You have to draw at least 4 different position of the crank CD.

(10 marks)
